

Heathwood Lower School use SCC.

SCC were really supportive. They worked with us in terms of what we needed and provided us with some great options. – Susanne Dove, Head Teacher

Heathwood Lower School
Leighton Buzzard

Heathwood Lower School in Leighton Buzzard educates children between the ages of two and eight years old.

Over time, it became clear that the technology they were using was growing outdated. With slow internet connectivity and slower devices, children and teachers alike were becoming frustrated and seeing IT as an obstacle, rather than an enabler of educational resources.

Paul Dicker, Teacher and ICT Coordinator at Heathwood School said: *"We'd gotten to a stage where the children were using completely different things at home that were more up to date than what we had in school. This meant that when our devices took a while to load, they would become frustrated."*

SCC provided a solution which improved their connectivity speed and replaced their outdated equipment. They also installed touchscreen ProWise smart boards and tablets in classrooms, which allow students to interact and collaborate remotely from their own devices.

Paul Dicker added: *"Now [the children] are actually getting excited about the equipment and enjoying using it - us teachers are enjoying using it as well."*

Teachers have found students more engaged when using the new technology, which is being used for teaching from pre-school right through to Year 4 classes.

Head Teacher of Heathwood Lower School, Susanne Dove said: *"Previously, we would have to wait when the children were logging into laptops and desktops, it was taking too long and this it was taking time out of learning."*

"After this project to replace as much as we can, the children are absolutely thrilled. It's new technology which excites them and they are able to use it in a far greater way than ever before."

"After we placed our order with SCC, it was here within a week. It was a really quick service."
