SCC is the trusted technology partner to Lambeth Council, so when they initiated a transformational project comprising Active Directory, Exchange and Virtualisation elements, we were able to meet the brief.

As part of its overall ICT transformation, Lambeth Council wanted further Citrix technology – including NetScalers and Citrix XenDesktop platinum licenses – to ensure a secure and compliant service for its clients.

SCC's Solutions Architect team scoped out the requirements of the project and put together proposals including case studies, high-level technical designs and comparisons of Citrix XenApp and XenDesktop integration across the estate.

Eventually, Lambeth Council chose SCC to deliver a mix of XenApp and XenDesktop publishing business applications for the 2,500 users across the borough.

Solutions Architect Manager Piers Covill said: "SCC did an excellent job in their delivery of the proposition and illustrating how their recommendations would work.

"There were obstacles to overcome but SCC committed to providing the council with the best solutions to fit the brief."
